DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 26-103 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 26-103 rejected under 35 U.S.C. 103(a) as being unpatentable over MacDonald et al (U.S. PG Pub No. 2004/0019558) in view of Messing (U.S. Patent No 7,039,805).
- 4. As per claims 26, 31-34, MacDonald et al teach a method of using a computer system to facilitate a real estate transaction comprising receiving real estate transaction information for the real estate transaction (such as sale of property, estate financing, insuring property, sale of mortgage), outputting a preliminarily compiled at least one form electronic document to be used in the real estate transaction, wherein the form is compiled with at least some of the real estate transaction information; receiving a digitally scanned image of at least one ancillary document, and outputting the at least one ancillary document in conjunction with a finally compiled said

preliminary compiled at least one form electronic document integrating a signature into said preliminary compiled at least one form electronic document (see figs 3, paragraphs 0015, 0031, 0032, 0033, 0073, 0091-0271). MacDonald et al fail to teach receiving an electronic signature indicating approval of the preliminarily compiled at least one form electronic document. However, Messing teaches receiving an electronic signature indicating approval of the preliminarily compiled at least one form electronic document (see column 2 lines 5-35, 3 line 55-4 line 26). Therefore, it would have been to one of ordinary skill in the art at the time the invention was made to modify the MacDonald et al's inventive concept to include Messing's invention of receiving an electronic signature indicating approval of the preliminarily compiled at least one form electronic document because this would have created a more agile system.

- 5. As per claims 27-30 and 35-41, MacDonald et al teach a method wherein the real estate transaction information is party information identifying a party (buyer, a seller, a borrower, a lender, a mortgage investor) and (the property, financial information such as loan) related to the real estate transaction and wherein the signature integrated into the finally compiled at least one form document is a handwritten signature (see figs 3, paragraphs 0015, 0031, 0032, 0033, 0073, 0091-0271).
- 6. As per claims 42-103, the disclosed the same inventive concept as claims 26-41 and their limitations are fully taught in MacDonald disclosure. Therefore, they are rejected under the same rationale.
